

What is Metamask?

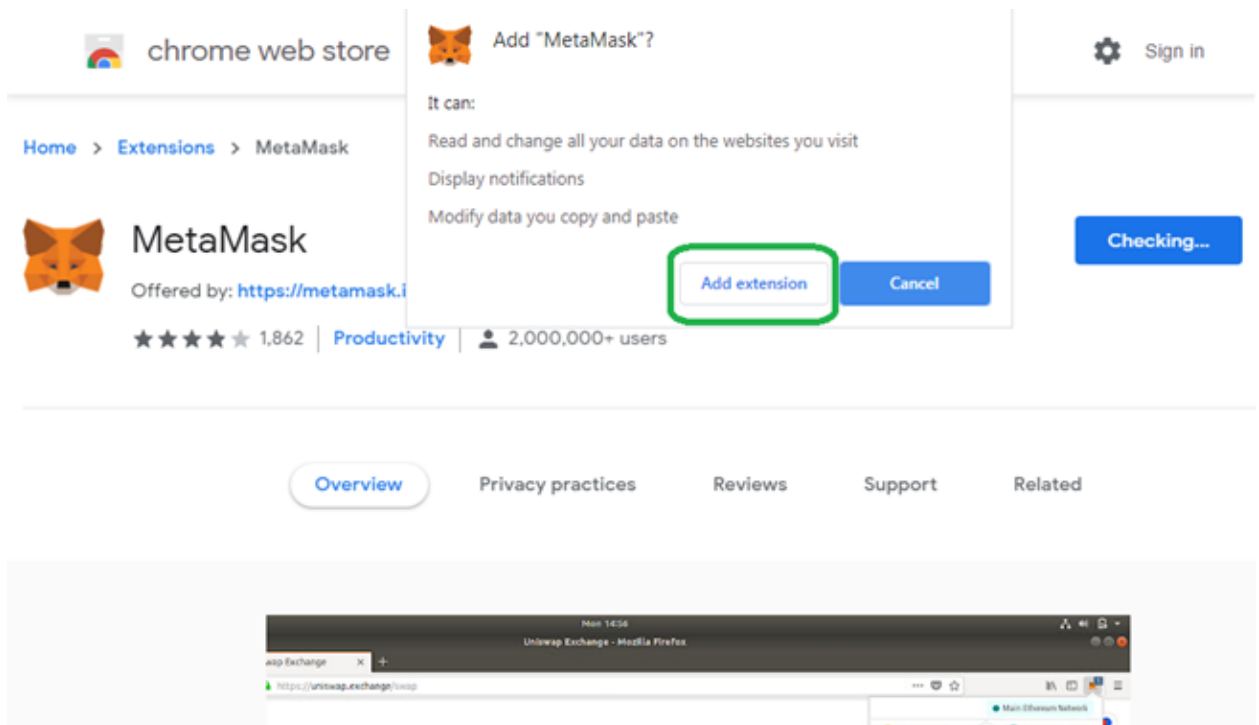

Metamask is a software cryptocurrency wallet used to interact with blockchains. It allows users to access their wallet through a browser extension or mobile app, which can be used to interact with decentralized applications (Dapps).

How to Setup a Metamask wallet?

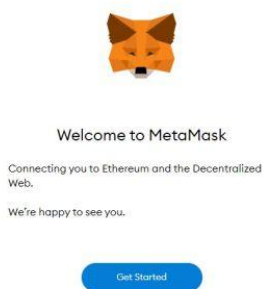

1. Go to Metamask's official website [here](#) and click on "[Install Metamask for Chrome.](#)"
2. You should now be on Metamask's Chrome Web Store page. Click on "Add to Chrome."

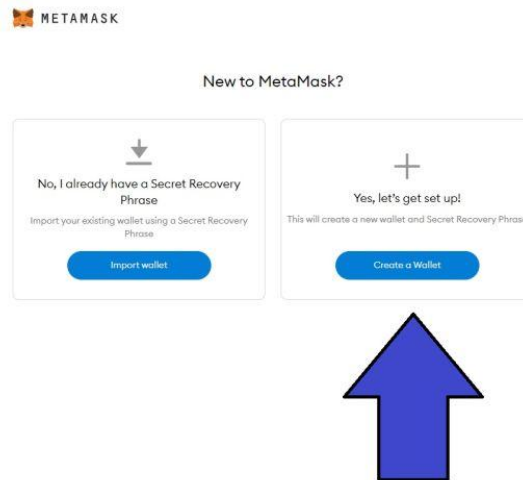

3. A pop-up entitled "Add 'Metamask?'" should appear. Click on "Add Extension."

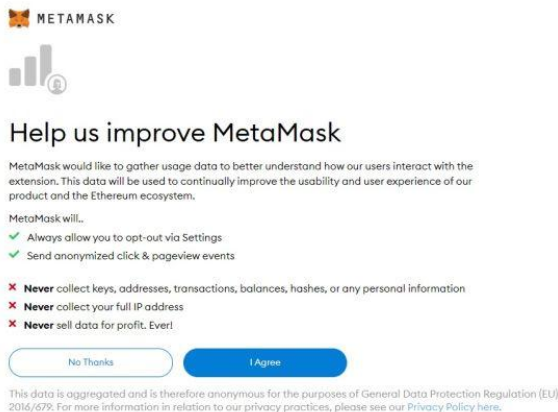

4. A new tab will appear. Click on "Get Started."

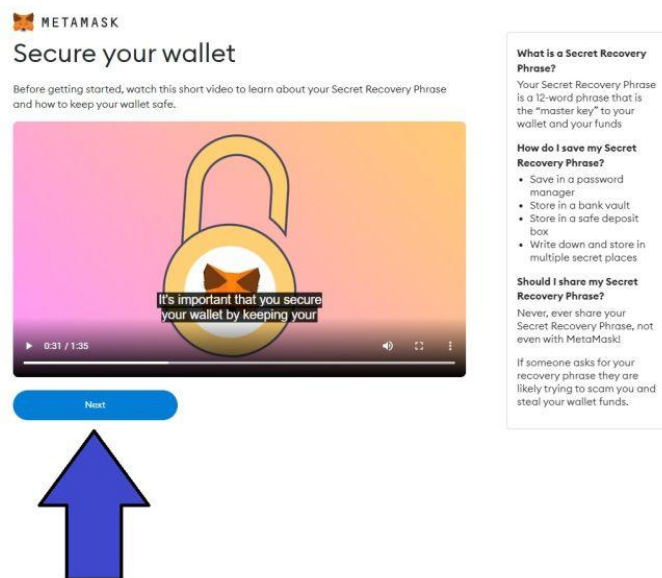

5. Click on "Create a New Wallet" under "Yes, let's get set up!"

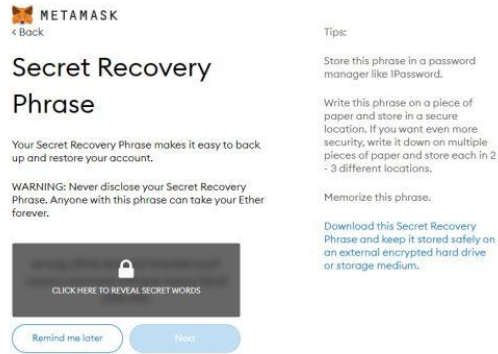

6. Metamask will then ask whether it can gather your usage data. If you accept, click, "I Agree." If not, click, "No Thanks." Selecting the latter will not affect your ability to move forward in the setup process

7. Create a password for Metamask. choose a password you haven't used for other accounts. also recommend using a long, complicated password.
Next, tick the "I have read and agree to the Terms of Use" box.
8. You'll be guided to watch a short video on how to secure your Metamask wallet, which involves writing down and storing a secret recovery phrase (a string of 12 words that gives you, or anyone else who has it, access to your Metamask wallet and its contents). Hit "Next."

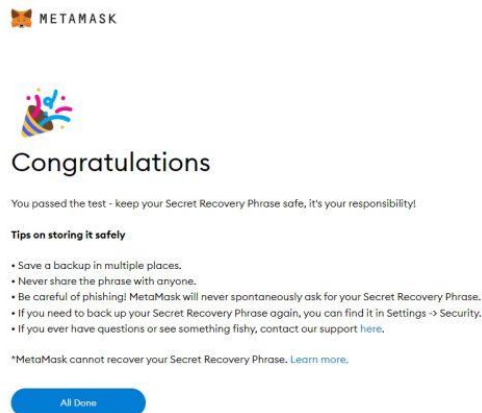

9. You'll land on a page that has your 12-word recovery phrase. Click on the grayed out area to reveal it. Once you've written it down, hit "Next."

**Warning* Do not, under any circumstances, give out your recovery phrase to anyone. You should also keep a copy of your recovery phrase, but put it somewhere safe. If your computer crashes, and you don't have your recovery phrase, you won't be able to access your Metamask wallet.*

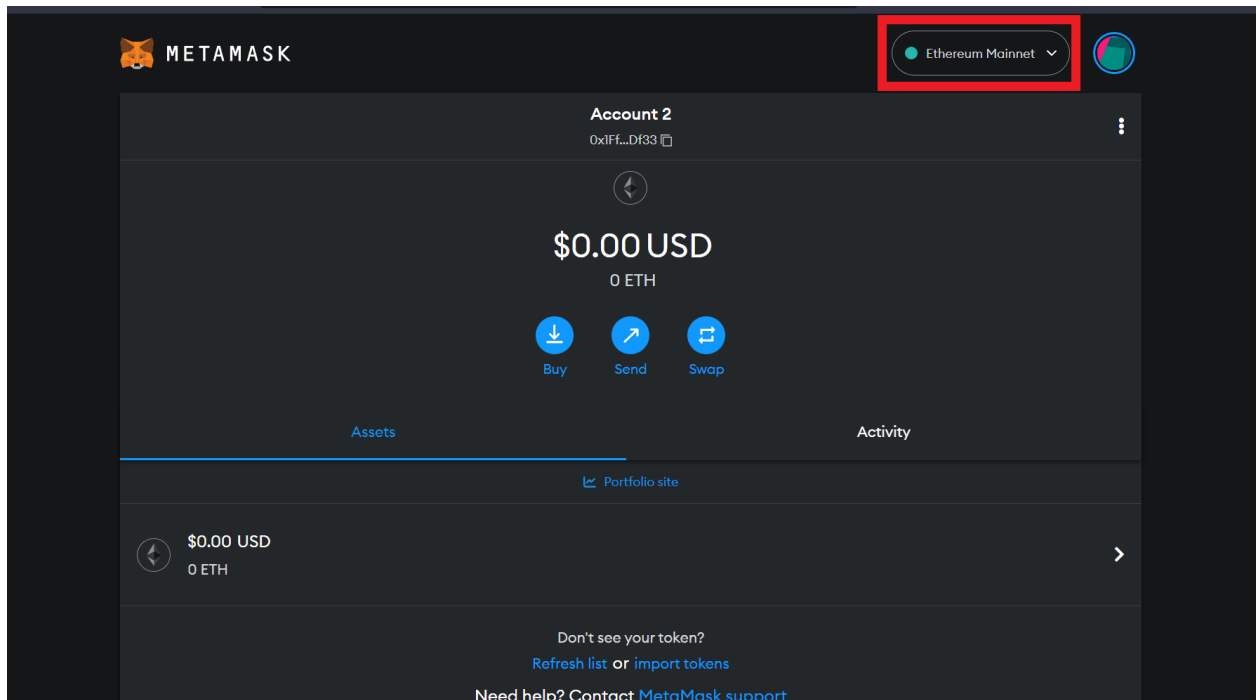

10. Confirm your secret recovery phrase by putting the 12 words in the right order. Click "Confirm."

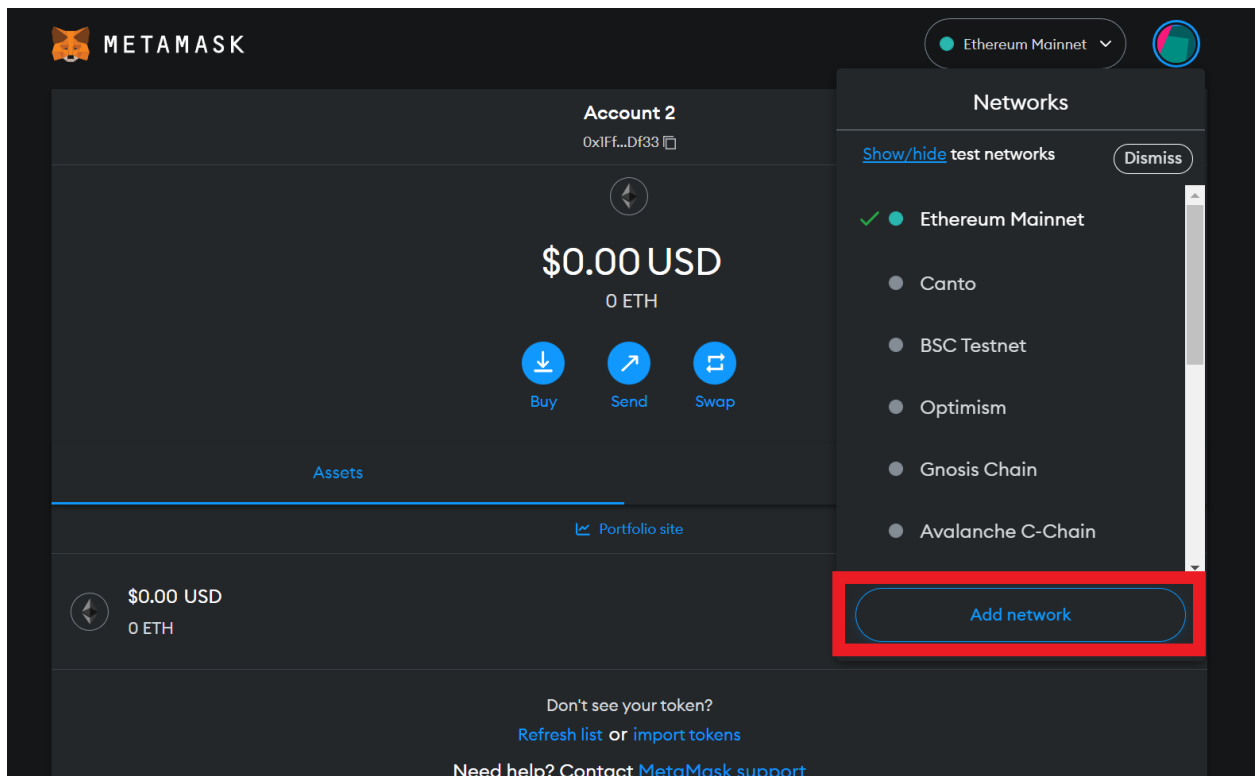

11. Once you've completed step 10, you'll land on a page that says, "Congratulations!" You officially have a Metamask wallet that's ready to go. Click on "All done."

How to add the XDC network to metamask?

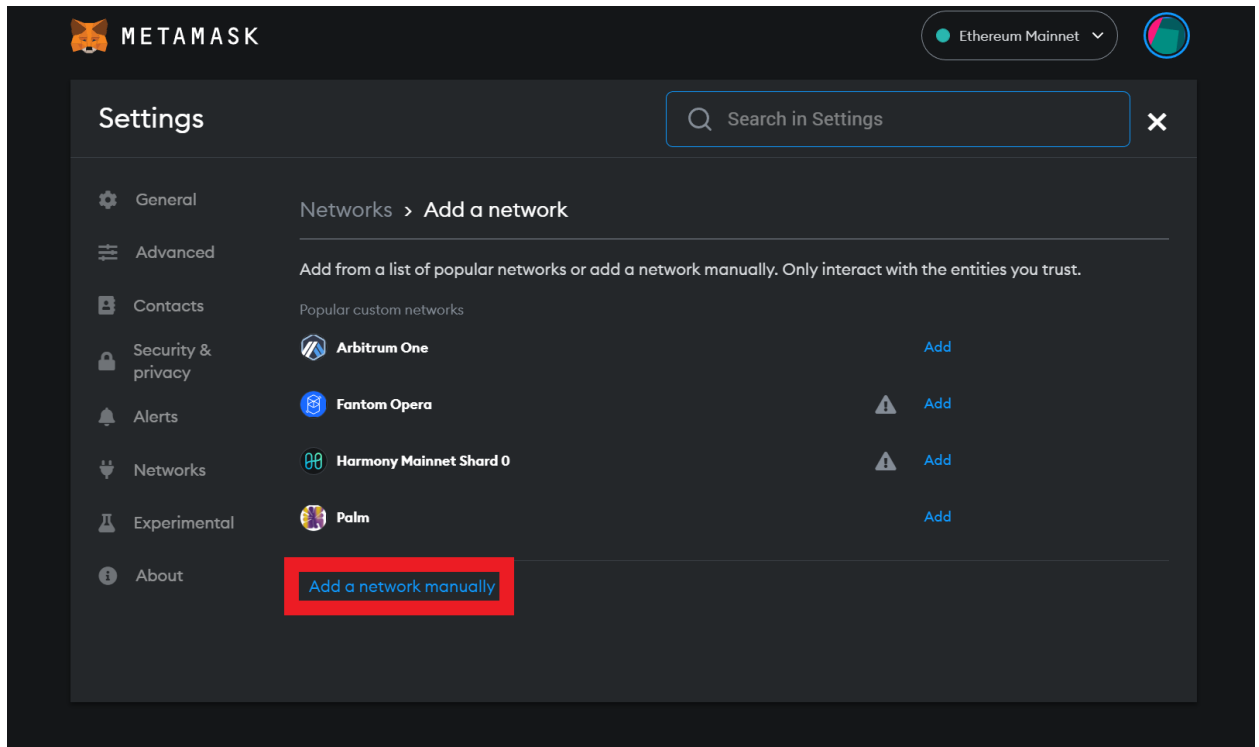

1. Open metamask and click on the button saying Ethereum Mainnet next to account icon to open a drop down

2. Click on add network

3. Click on add a network manually

4. Fill These details on respective columns:

Network Name: XinFin Network Mainnet

RPC url: <https://rpc.xinfin.network>

ChainID: 50

Symbol: XDC

Block explorer url: <https://explorer.xinfin.network/>

Then Click on Save.

You have switched to

?

XinFin Network Mainnet

Things to keep in mind:

The native token on this network is **XDC**. It is the token used for gas fees.

If you attempt to send assets directly from one network to another, this may result in permanent asset loss. Make sure to use a bridge. [Learn more](#)

Your tokens may not automatically show up in your wallet. [Click here to manually add the tokens.](#)
